ATS Slayer™ Installation Guide

For ATS Slayer™ 1.x

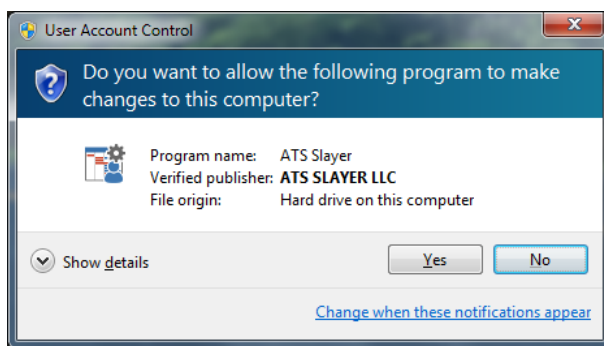

Reminder: Since ATS Slayer™ is a subscription software product, it is always up to date. The HiredHibernate® feature allows you to continue to use the Success Repository® and the JobPrepper® Lite edition after your subscription runs out.

NOTE: The HiredHibernate® is not available to customers who request a refund as the software must be removed as part of the license agreement.

Installation of the product:

Simply double-click on the ATS_Slayer_Setup.exe and start the standard Windows® installation process.

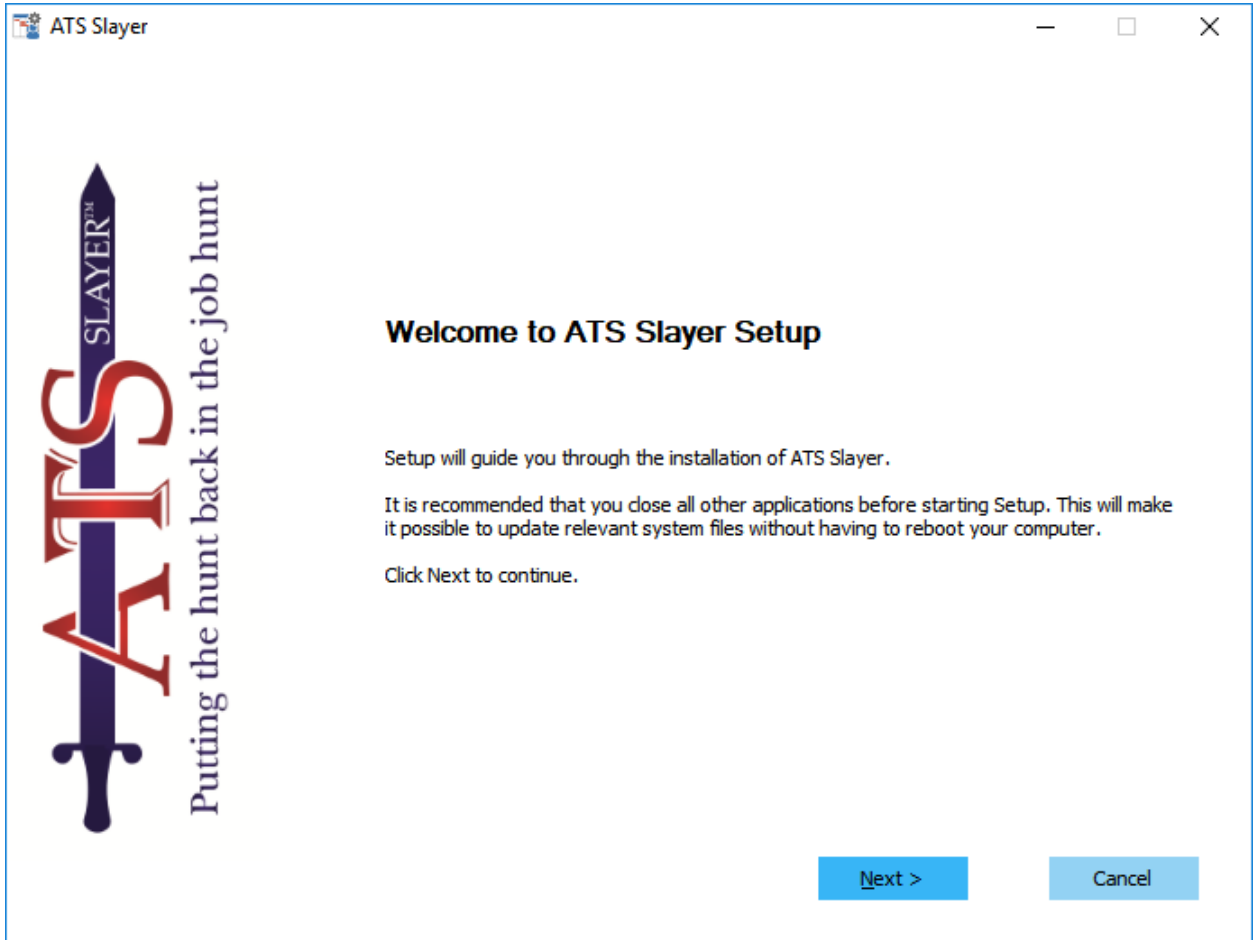

1. First you have to answer Yes to start the install process.

2. Then the ATS Slayer™ install splash screen will show.

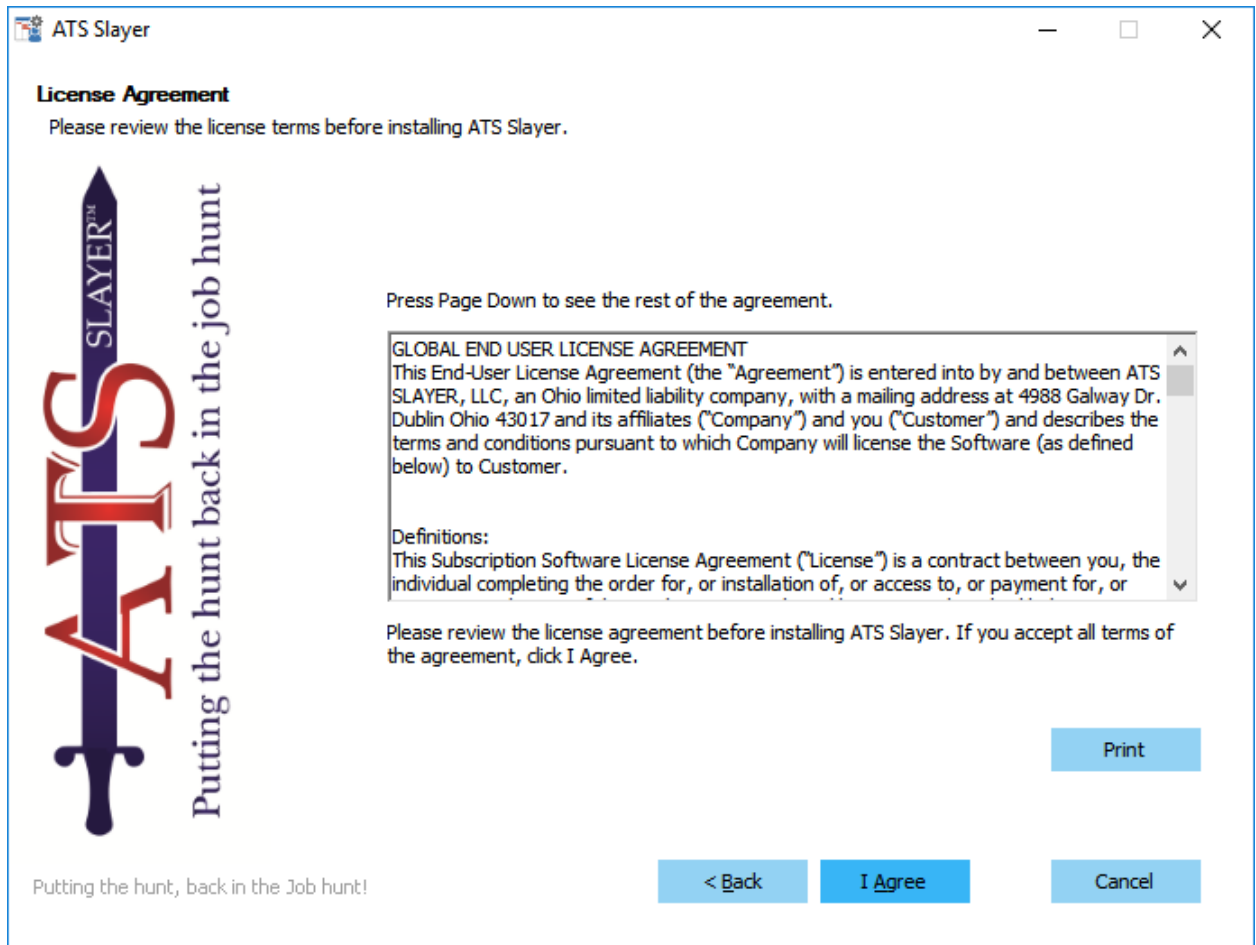

3. After the Splash loads it will display the first page of the installer.

You can press the **Next>** button to continue the installation.

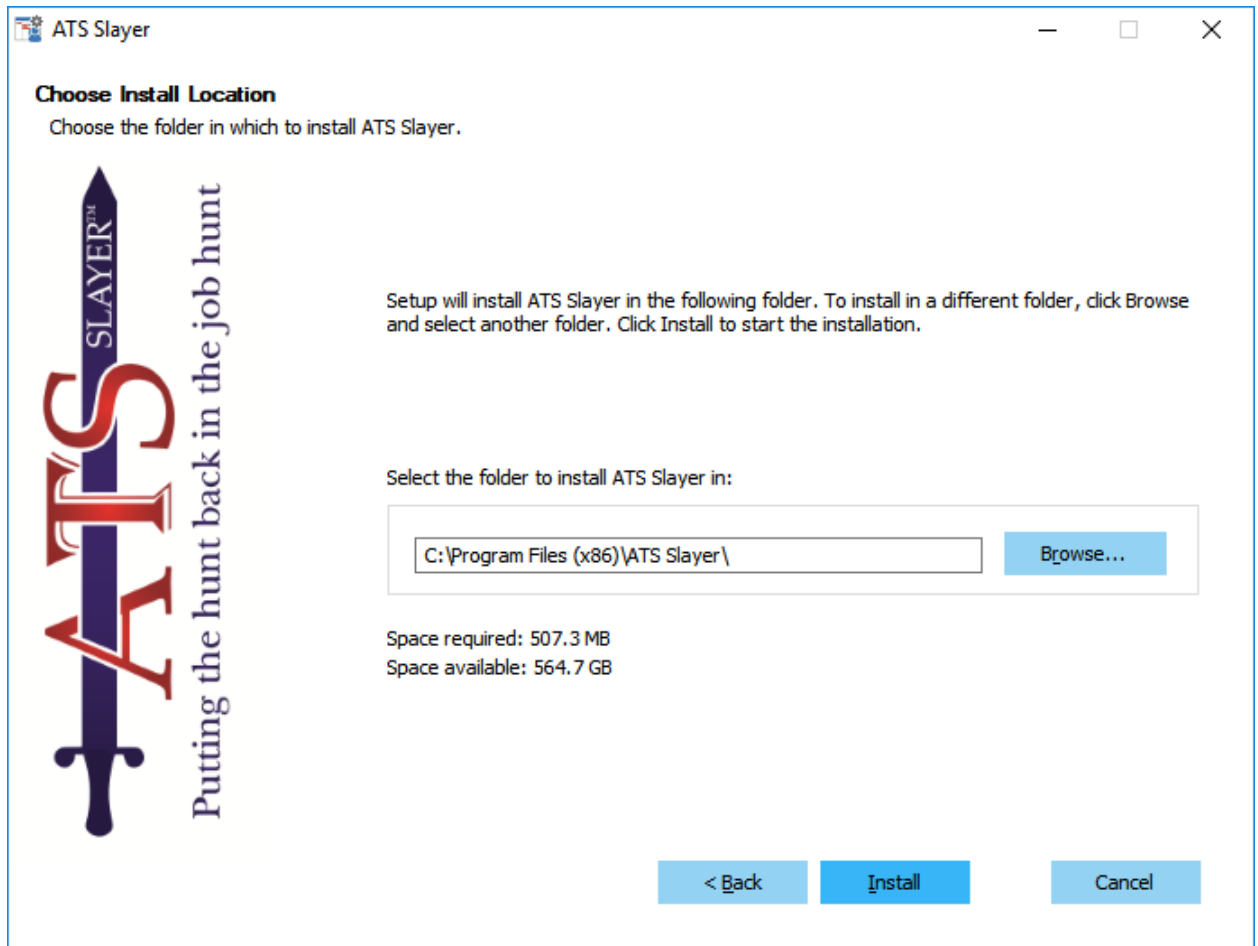

4. Next will display the ATS Slayer™ License Agreement – very important to read the contents.

We give you the ability to print the license agreement. After the install, we place a copy of the license agreement in the ATS Slayer directory.

Press the **I Agree** button. If you do not agree with the license agreement you cannot install the product.

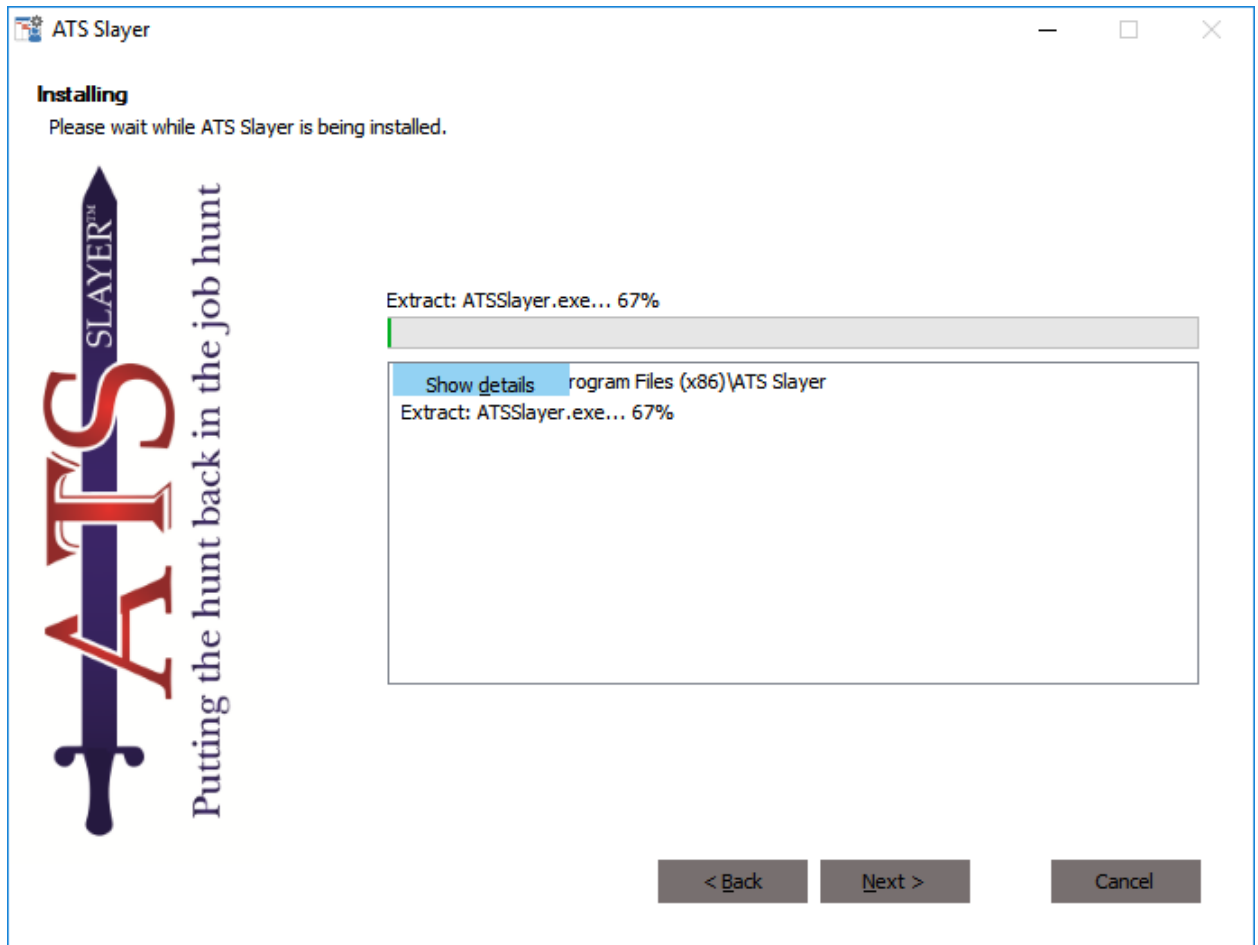

5. Next will be the Install directory where you can choose the location of the ATS Slayer™ install directory.

This allows you to pick the drive and directory, but we strongly suggest you use the defaults.

Press the Install button to start the install.

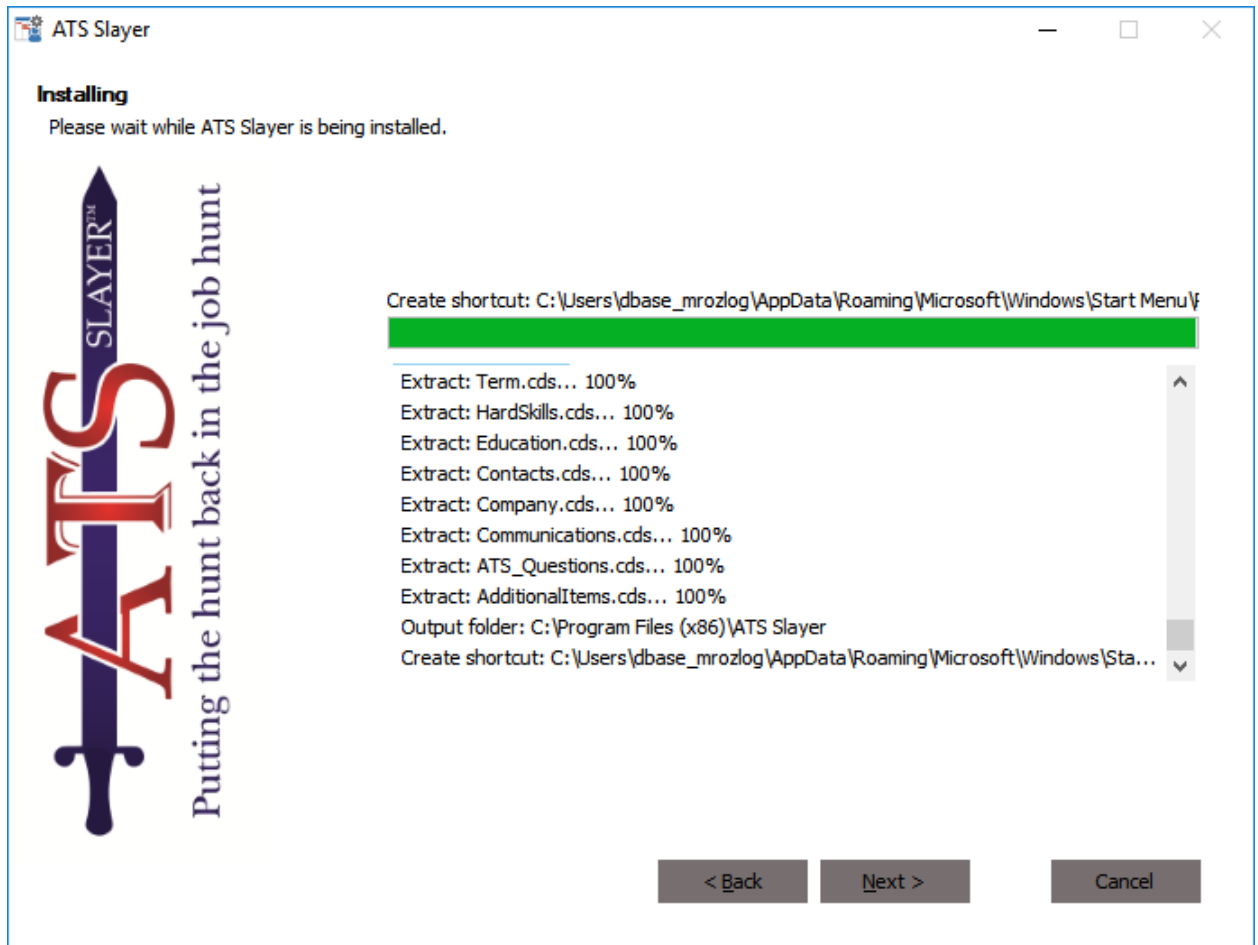

6. The install process will load the needed files onto the drive and location you chose.

This install usually takes less than 5 minutes from beginning to end!

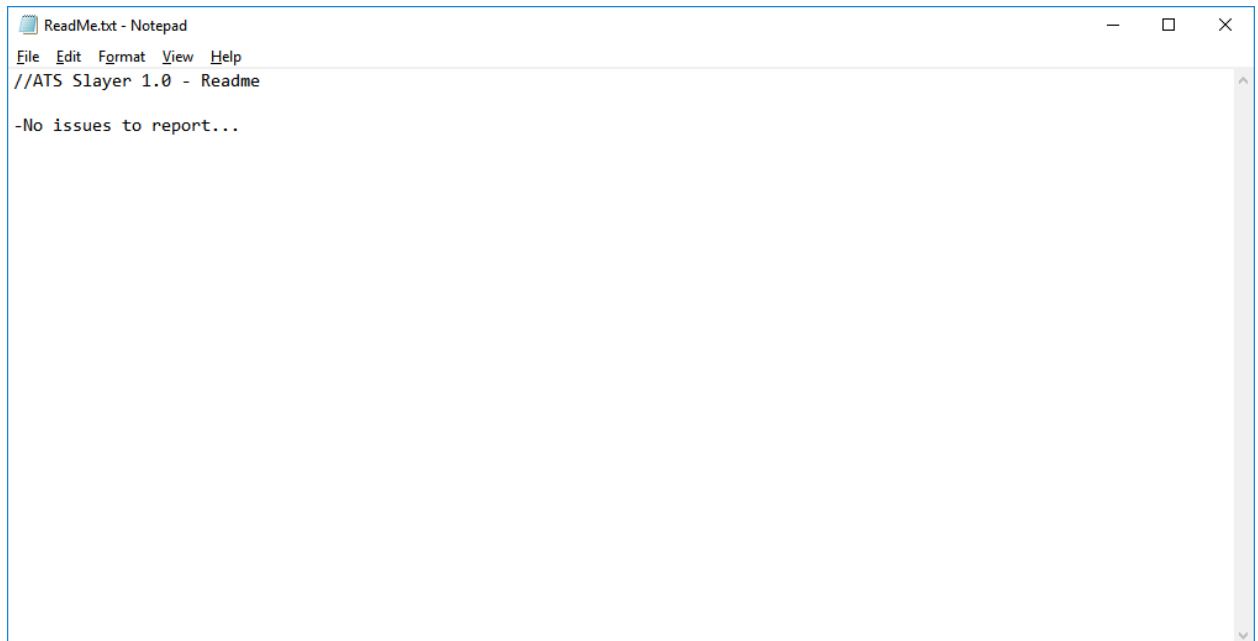

All buttons are deactivated during the install process.

7. Showing the standard install progress being made.

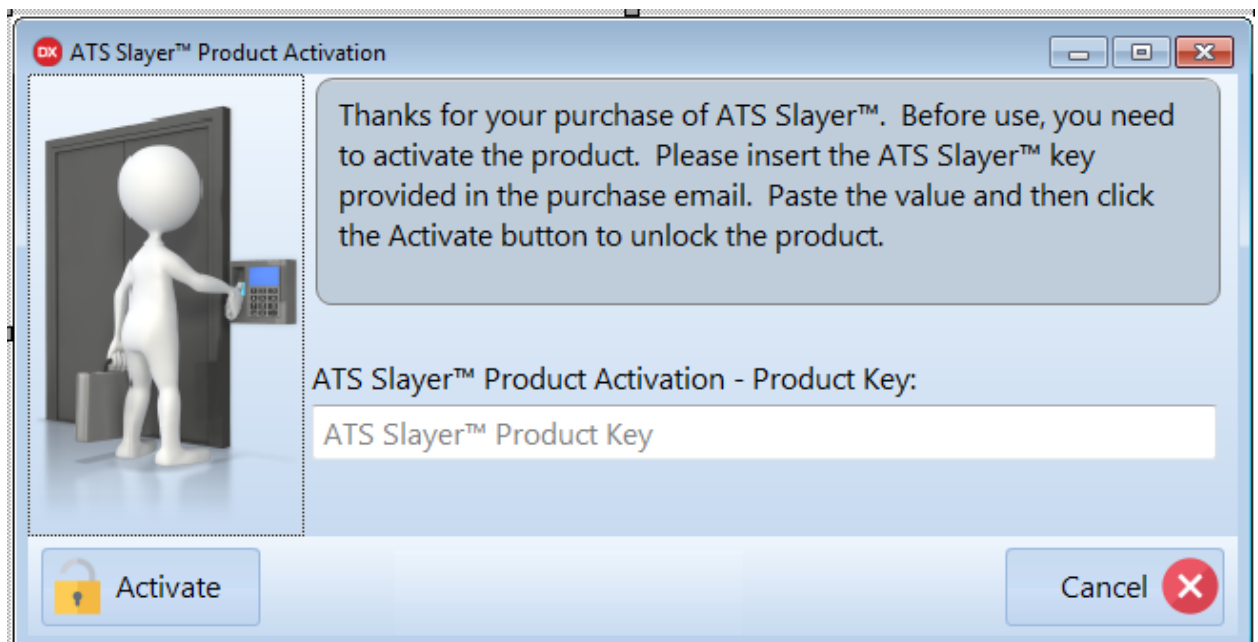

All buttons are disabled.

- Next when you start ATS Slayer™ for the first time you will see the Readme.txt file with the latest information on the product.

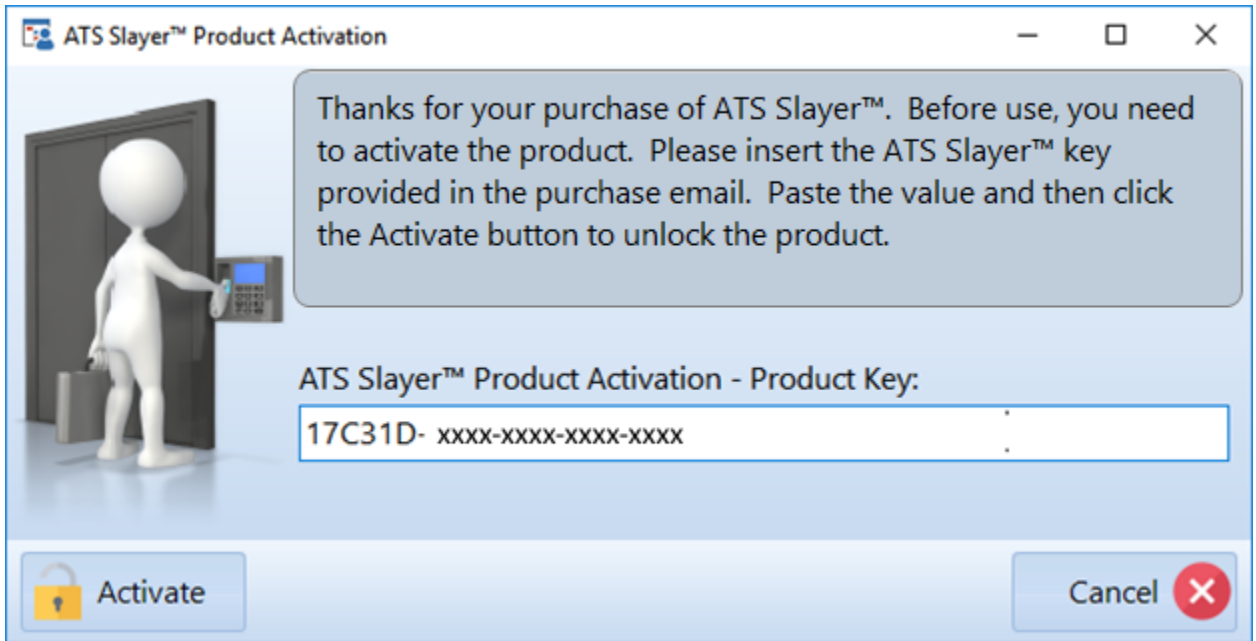

You can close this when finished.

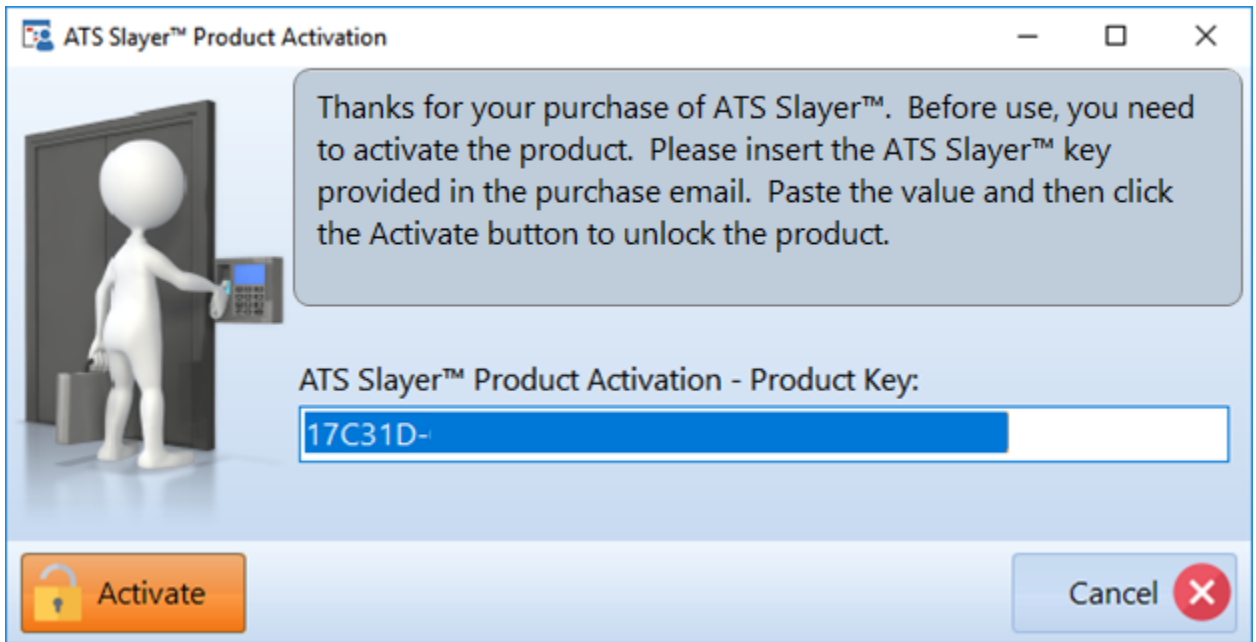

- It will also kick off the product. The license dialog will be displayed. This dialog will take the Key from the email you received and you should copy the key from the email, and paste into the Product Key edit box:

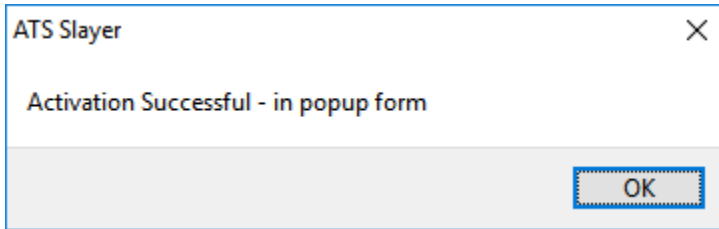

10. Once you have the Key copied into the edit box you can click the Activate.

11. You will know that you pushed the Activate button as it will change colors. This process can take a few minutes depending on your internet speed.

12. When Activation is complete you should see the following dialog:

Press the OK to continue.

13. You should now be able to start ATS Slayer™ by either double-clicking the icon on the desktop or starting it from the Start Menu.

When ATS Slayer™ starts it should look like:
